

OPTIWISE™ GRADE OPTIMISER

A realtime structural grade
threshold optimiser

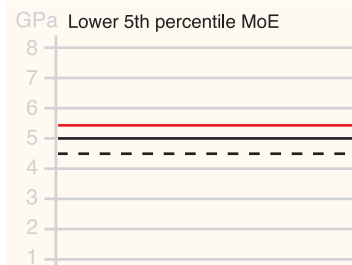

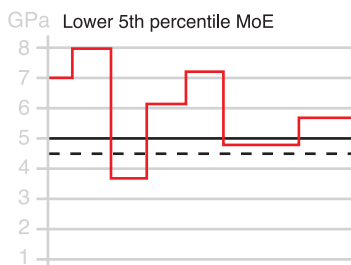

OPTIWISE™ GRADE OPTIMISER

Optiwise™ is a grade threshold optimisation algorithm that will ensure specified grade targets are met in realtime at the Ecooustic™ Grader. Wise decisions can be made by optimising grade thresholds to ensure compliance while maximising grade yield and profits.

WITHOUT OPTIWISE™

WITH OPTIWISE™

Optiwise™ works by adjusting the rolling, batch or population averages within the various grades being segregated to deliver optimal results. This puts you in total control and means that high value product doesn't get incorrectly graded because threshold settings are too high or low. Because it operates in real time, any changes in resource can be detected instantly and adjustments made accordingly. No more finding out weeks down the track when it is too late.

- Ability to set tight thresholds
- Maintain consistent results to set values
- Maximise grade yield while maintaining compliance

Significant production upgrade has been consistently achieved by incorporating Optiwise™ with the Ecooustic™ Grader. This means a very fast payback on investment.
