

ABOUT CALIBRE EQUIPMENT

Experts in Timber Grading
and Testing Equipment

"We're dedicated to personal **service**,
quality, **precision** and maximising
your business performance"

CALIBRE EQUIPMENT

We are dedicated to designing and manufacturing innovative and robust equipment and technology solutions to maximise your business performance.

Calibre Equipment was founded with the aim to provide the best timber grading and quality assurance equipment possible.

Our innovative, robust and cost effective solutions have seen our equipment become the first choice of the New Zealand and Australian timber industries. We are continually improving our solutions and provide outstanding customer service and support.

Calibre Advantages

Core Business

Timber grading and quality assurance equipment is our focus

Industry Leaders

Our equipment is being continually developed

Standards Compliant

Approved for use by leading NZ and Australian audit bodies

Proven Record

Successful installations throughout Australasia

Web Backend

We offer unequalled analytics and ease of use

High Quality Design

Our equipment is quicker, easier to use and safer

Robust Engineering

Durable, precise construction to be relied upon

Customer Service

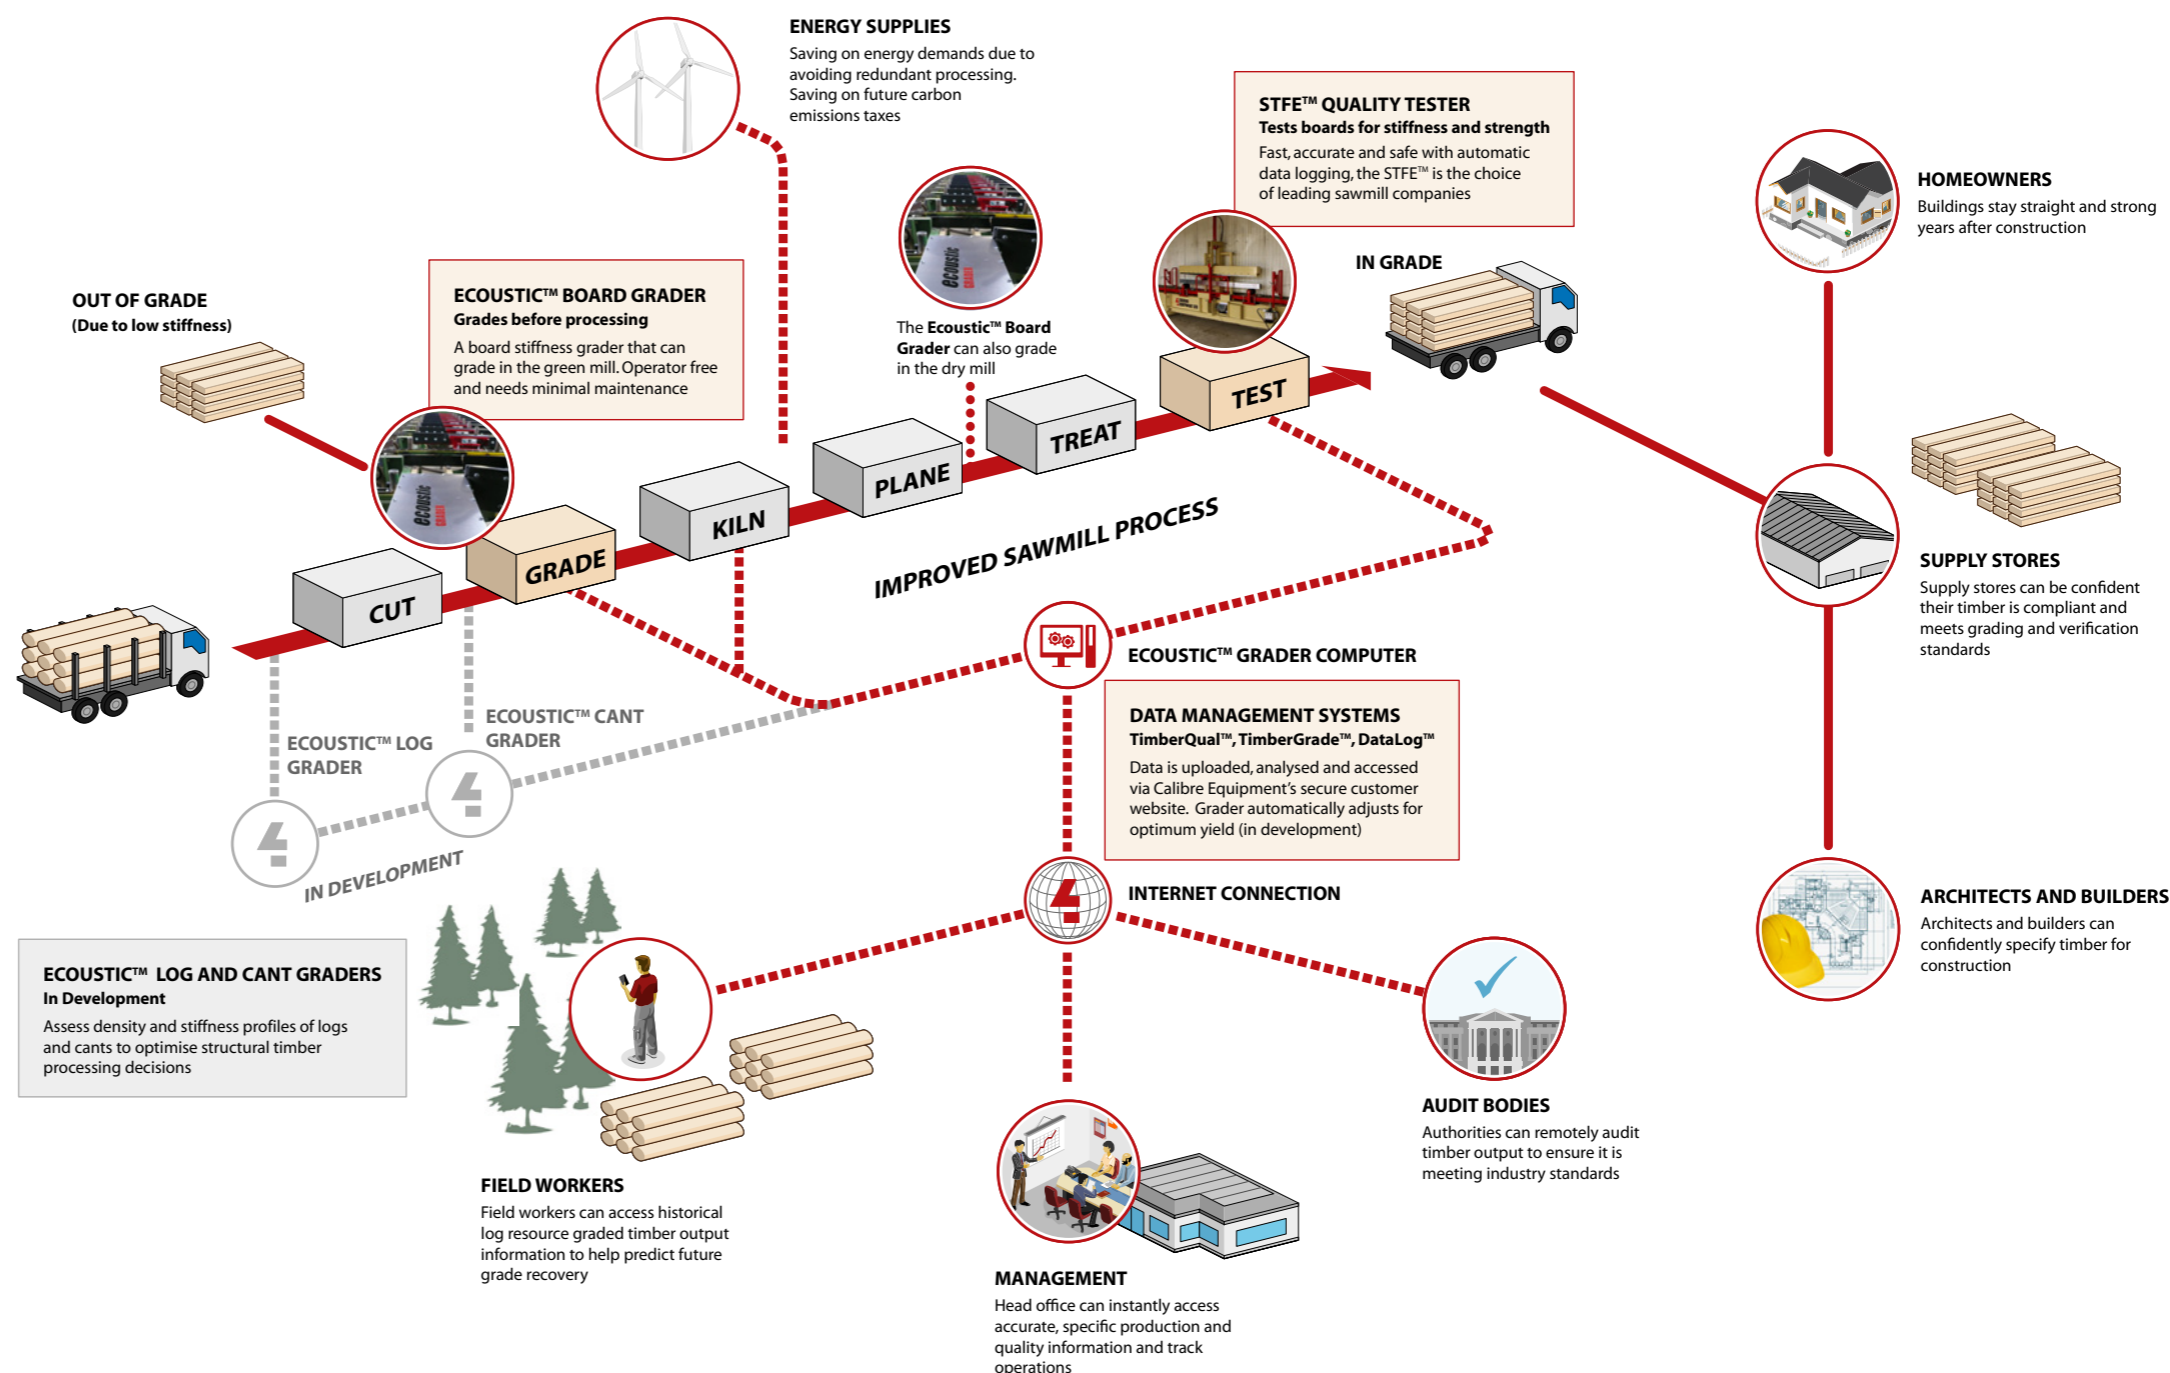

We pride ourselves on industry leading service

We Believe in Comprehensive Solutions

In order to maximise production efficiencies, we've developed a grader that can operate in the green mill, a fast and accurate quality tester, and an automated, intelligent software system to provide simple, useful analysis of production and testing data.

This is our model of how a sawmill can maximise efficiency to maximise profit:

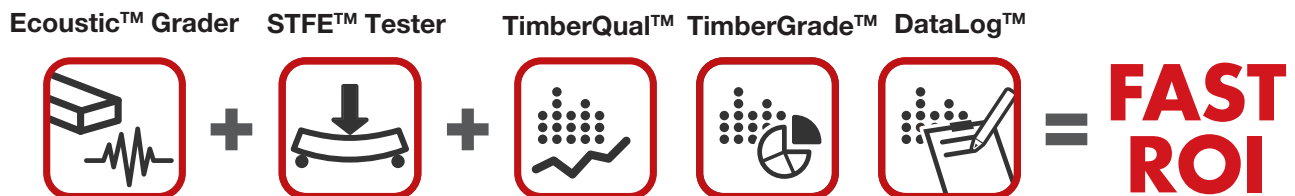

- ▶ The Ecooustic™ Grader removes out of grade timber, due to low stiffness, before processing, to save on processing costs.
- ▶ The STFE™ quality tester speeds up testing and accurately provides data to optimise the grader settings.
- ▶ The data management systems, log and analyse all production and testing data, to provide quick and useful information and makes it available through a web-based interface.
- ▶ Finally, the finished boards are assured to be individually and accurately graded to maintain compliance and command a higher price.

IMPRESSIVE RETURN ON INVESTMENT

Our structural timber grading system has been shown to have an impressive return on investment. Due to immediate cost savings and increased processing capacity, our customers have been able to substantially increase profits. The equipment pays for itself quickly and then productivity gains go straight on the bottom line.

Calibre Equipment System

ROI Calculator

We would like to show you how the numbers stack up for your business. We have developed a detailed calculator that will show you the return on investment for your specific situation.

Please contact us for a free assessment. You will be surprised at the savings our system can make to your business.

Future Developments

We are continually investing in research and development and are currently developing two more products to complete our system:

The **Ecoustic™ Log and Cant graders** will assess density and stiffness profiles of logs and cants. Once these products are finished, the whole system will be integrated and data from all products will be used to tune and optimise the entire system.
