

# DATA MANAGEMENT SYSTEMS

Easily record and analyse production and quality data

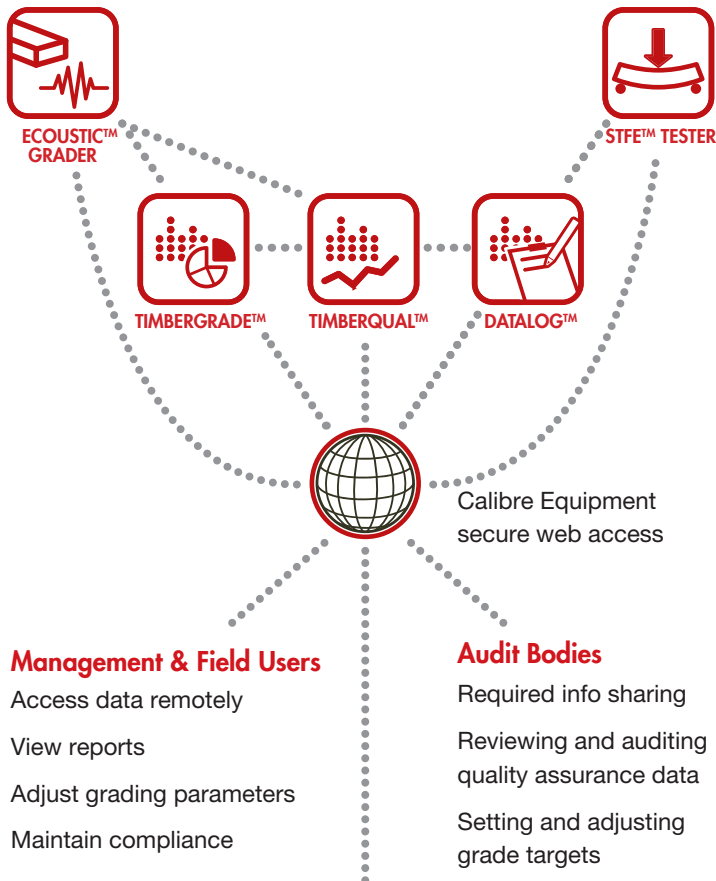

"One key feature is to assess the value of logs from suppliers and predict future grade recovery"

## DATA MANAGEMENT SYSTEMS

Our Data Management systems are an internet based data analysis suite, offering unprecedented access to key data.

Accurate analysis is provided on timber grading and quality assurance data, with complete web-based access.

### TimberGrade™

- ▶ Records Ecooustic™ Grader board data
- ▶ Records length, width, thickness, density and MOE
- ▶ Reports number, volume and percentage by grade
- ▶ Production tallying and reports
- ▶ Specific date/time search

### TimberQual™

- ▶ Interprets STFE™ quality testing data
- ▶ Calculates all required statistics
- ▶ Monitors compliance against verification standards
- ▶ Flexibility to easily change species, size, grades being monitored as well as grade targets
- ▶ Automatic optimisation: automated grade threshold optimisation coming soon

### DataLog™

- ▶ Records timber verification data
- ▶ Ensures correct testing process
- ▶ Load and deflection are auto-recorded
- ▶ No need to pinpoint specified deflections and loads for different timber sizes, which makes testing easier and faster

### Management & Field Users

- Access data remotely
- View reports
- Adjust grading parameters
- Maintain compliance

### Audit Bodies

- Required info sharing
- Reviewing and auditing quality assurance data
- Setting and adjusting grade targets

### Calibre Equipment

- Support, troubleshooting and diagnostics
- Automatic software update
- Secure, off-site data storage
